- Generates custom reports for physician or patient
- Multi-user network ready
- Assigns expiration date and lot number
- Exchange formulas and ideas via total Internet integration
- Optimized for Windows 98/2000/XP

EVERYTHING YOU NEED TO START COMPOUNDING

CompoundAssist is much more than a “cookbook” of formulas. It’s a complete business package, from inventory control and ordering support to a print utility that generates machine-scannable bar codes for compounded medications. CompoundAssist even provides counseling sessions, tracking, and reporting.

Q: I haven’t compounded since Pharmacy School. Will I be able to make this work in my practice?

A: Yes! CompoundAssist gives you instant access to the latest compounding techniques and formulas, tailored to all pharmacies and includes a continually updated set of formula templates from our experienced team of compounding pharmacists.

Q: Where do the formulas come from?

A: Formulas for commonly-prescribed medications are developed by experienced compounding pharmacists and all are peer-reviewed before being included with CompoundAssist. In addition, you can add formulas on your own, or accept them from the prescribing physician.

Q: How do I order the raw ingredients?

A: Information on sourcing and ordering is included, as well as a virtual “want-book” for selected formulas and an inventory control system.

Q: I already compound. Can I use CompoundAssist?

A: So do we! CompoundAssist was written and developed by compounding pharmacists, and can help you take your practice to a higher level. There are built-in utilities to share and acquire new formulas on the internet, and to grow your business through new market strategies. You will find that your existing database of formulas and patients can easily be included in CompoundAssist, so you won’t miss a step!
